R E P O R T

OF

THE SCHOOL BOARD,

OF THE

TOWN OF PELHAM, N. H.,

FOR THE

YEAR ENDING MARCH 1, 1890.

SCHOOL BOARD.

GEORGE H. CURRIER, . . . Term expires March, 1890.

AUGUSTUS BERRY, . . . Term expires March, 1891.

SHERMAN HOBBS, . . . Term expires March, 1890.

REPORT.

The number of schools the past year, five; each of thirty-one weeks. Four had the same teachers through the year. In three of these the teachers had taught the previous year, and the schools had the advantage of the continuous work of a good teacher. There has been good instruction in each of the schools and the progress of the scholars has been satisfactory.

Our estimates are in a large degree relative. This is especially so in all our estimates of schools. There has been a great advance in the cause and work of education in the last twenty-five years. There is a better conception of that in which an education consists—truer methods and many improved implements in teaching. While the attention is not attracted to these as it is to the material inventions of the age, such as the telegraph, the telephone, electric lights, the improved implements of the shop and the farm, they are, nevertheless, of a like magnitude and importance.

The true idea of a school has not yet been attained. The actual advance towards it fails to be apparent because all improvements are so entangled with old habits and methods. The actual advance of society is silent. It is especially so in the cause of education. It is encouraging to feel assured that this is true in regard to the cause in this town. The methods of the schools have been silently but effectually changed. This cannot be ascribed to any individual or individuals. The cause is in the atmosphere; it has come from the State Normal School; from the Normal Schools of Massachusetts;

from Journals of Education that drop at the feet of teachers like the leaves of autumn; from the reports of educational gatherings and the utterance of educational men and women, that every newspaper publishes, and thus are carried into every home where a newspaper enters.

It is encouraging to find that ideas upon education that once were virtually repudiated are now accepted. Such is the importance of starting right. Frequently it takes several terms to correct the faulty methods that a child has been allowed to pursue. Another of these ideas is that the pupil must do the work of learning and not the teacher. Another is that the work of the school is not to be measured by material standards, such as text-books completed and laid aside, pages that the pupil has gone over, but by the mental power the pupil has developed, the clear ideas he has attained, his understanding of elementary principles, his ability to control and direct his thought.

There has been a marked improvement in reading. A fault of all the schools in this branch is in the process of correction. Instead of permitting the pupil to advance daily from lesson to lesson in reading, he has been detained on each lesson till he could read it with a degree of accuracy. The result has been better reading in all the schools, and some very good readers in each of them.

The same method has been pursued in grammar and while the result has not been as marked, a fresh interest has been created in the study. The best results in the study of language have been by children, eight, nine and ten years of age, in the study of some simple language lessons. In some instances they have attained an accuracy in writing greater than the advanced scholars of the school.

There has been some thorough work in arithmetic in each of the schools. Pupils have been detained upon rules and principles till they understand them. It was interesting to notice at the close of the fall terms, that several of the schools with no knowledge of each other and what each had been doing, were in the same grade of work in arithmetic, performing the same amount and with the same thoroughness. It is to be hoped that the time has forever past, when the school shall be estimated by the amount of text-book gone over. From this faulty standard, writing in the schools in the past has been a practical failure. The use of copy-books has amounted to but little. The end that the pupil had in view was the completion of the book. The end of the teacher, to have this occupy a certain portion of the six hours of the school day. But now writing has become the study of a system in penmanship, and the application of its principles in practice, and some of the teachers have secured great improvement in penmanship.

It is important that the schools should be judged not by things attractive or unattractive, but by the work done in them. It is a hopeful feature in regard to them, that the examinations have not been gotten up for a half-day's entertainment, but to exhibit the actual work of the schools.

THE CHARACTER OF THE WORK.

This has been practical and natural. The aim has been an adaptation to the pupils capacity, starting with the simplest elements, securing a clear understanding of these, and then advancing to the principles that they underlie. Pupils have been taught the necessity of self-reliance and self-help. In some of the schools there has been a weekly exercise in general information, that has

interested the entire school and stimulated to close observation and inquiry

CHILDREN KEPT IN SCHOOL.

As the child reaches an age when, in the busy seasons, he can be of service in the home or on the farm, the temptation is strong to keep him from school during these seasons. This is poor economy in every sense. The labor of a child between the years of twelve and fifteen is but a fraction in value of what it will be later, while the child now has greater ability to learn. In being out of school the spring and fall terms there is not only the suspension of progress for these terms, the loss of what could and would be attained in them, but the interest that has been aroused is discouraged, the intellectual activity becomes stupid and dull, and when another winter term comes, the pupil often has but little courage for faithful and vigorous study. In some instances it is an inexorable necessity that takes the child of twelve or thirteen from the spring and summer terms, but, unless there be such a necessity, for the child's sake and the parent's sake he should be kept in school.

SCHOOL HOUSES.

The school house is an essential factor in the problem of education. The school cannot be at its best unless the conditions of the school room are the best. The school of to-day is different from the school of forty or fifty years ago and a different school room is demanded. The citizens of the town should remember that the school room of twenty-five or thirty years ago needs remodeling as much as any buildings of the farm. The town has two new school houses; two others have been remodeled and repaired so as to be substantially new; and when some much

needed repairs are made upon the house in No. 4 the town will have school buildings and school lots adapted to the school work of this day, and such as will attract the attention of every stranger. It is doubtful if better could be found in a country town in New Hampshire. And with a right public sentiment these may be preserved for a long time in their present neat and inviting condition. The economy of immediately painting, varnishing and repairing, when a need exists, should be recognized.

FREE TEXT-BOOKS.

It must be a matter of pride and satisfaction to the citizens of the town that they acted in this matter prior to the state. It has certainly added much to the efficiency of the schools. Some parents prefer that their children should own their books. To such it is not only a convenience, but a saving in expense. In most instances the books have been used with care. Many parents have covered those used by their children, and some of the teachers have covered the dictionaries and the books in general use in the school room.

GENERAL SCHOOL SUPPLIES.

At a comparatively small expense these have been furnished to the schools, thereby greatly facilitating school work, and relieving the teachers of embarrassment and trouble. Helps indispensable to the illustration of school work have been furnished in a limited degree. It is surprising how much some small trifling expenditure in these directions will do for the interest and solid improvement of the school, and it may be remarked that some of these simple and less expensive instruments of school work are better for the schools of this town than the more expensive.

CHARACTER.

This is the end of the school. Hence truth, purity, temperance, charity and reverence are virtues that should be nurtured in the school. Here children should be taught one of the cardinal principles of success in life, economy, carefulness, care not only for their own but the things of others, the property of the neighborhood and the town. The value of time, habits of industry and honest thrift should be learnt in the school.

In a country school where the people are the sovereigns, it is essential that the public schools should nurture the spirit of patriotism.

FLAGS FOR THE SCHOOL HOUSES.

There is something inspiring in our national banner. The life must be dead, the heart lost to every noble impulse, that does not throb with a higher purpose and is not quickened to better activities, as the eye beholds the stars and stripes floating on the breezes of heaven, and could the custody of a flag be committed to each of the schools, to be raised on a staff at proper seasons, to float above the school house, it would tend not only to nurture the patriotic spirit, but responsibility in every sense.

ITEMS OF INTEREST.

In No. 4, Mr. Alton Wilson has continued the gratuitous instruction of last year in music, performing a service of great value to the school. In No. 1, the teacher was very pleasantly remembered by her scholars at Christmas, and the teacher in No. 5 at the close of the winter term.

There have been two deaths of members of the schools during the last school year. Each occurred away

from home. Each was the most dutiful of pupils, tenderly loved by teachers and school-mates, and held in the highest esteem by the community.

Lizzie E. Harris, died in Lowell, Aug. 17, aged 13. Sadie A. Brown, in the city of New York, Feb. 11, aged 17.

THE ROLL OF HONOR.

It is gratifying that there are so many who aspire to a place on this roll, and it seems hardly fair that some lose the place, who are equally deserving with those who obtain it. Such is the case of the scholar who has made great effort to be punctually in his place, and is taken with sickness and is compelled to lose a day or days. Such has been the case of a number of faithful scholars the past year. The following scholars are reported in the registers as belonging to this roll:

GEORGIE L. HOBBS,
CLARENCE A. STICKNEY,
FRANK P. GAGE,
ALBERT J. RICHARDSON,

HELEN E. STOCKBRIDGE,
ETHEL H. WEBSTER,
DANIEL CARLTON.

STATISTICS.

Each of the schools had three terms, of respectively 9, 10 and 12 weeks.

SCHOOL No. 1—Miss Julia A. Bixby of Lowell, Mass., teacher for the year. Number of different scholars in the first term, 24; the second term, 29; the third term, 22; for the year, 29: boys, 14; girls, 15; average daily attendance for the year, 21.
